About Pet Putty™

What is Pet Putty™?

Pet Putty™ helps your pet's skin retain moisture and provides lasting protection against harmful UVA and UVB radiation. Pet Putty™ does this naturally, using no synthetic chemicals. It is 100% effective ingredient, having no water, petroleum, or alcohol-based filler ingredients.

Pet Putty™ is helpful in healing mild to moderate skin wounds and has insect repellent activity, adding to its efficacy in helping to manage your pet's skin needs.

Pet Putty™'s natural skin nurturing ingredients bind together, creating a thin, protective film that does not break down quickly under outdoor use. It has been tested and rated very water and sweat resistant.

Why is Pet Putty™ better for your pet?

Pet Putty™'s natural plant-based antioxidants **help protect from, and repair damage from, UVA and UVB rays.** UVA rays can cause photoaging (not burning, but direct damage to skin's DNA) and are present regardless of degree of sun. UVB rays can cause skin burning not only under direct sun, but under overcast conditions as well.

Pet Putty™ also cleanses, moisturizes, fights inflammation, bacteria, fungi, and has insect repellent properties. It is effective at helping to heal skin wounds, abrasions, and chaffing.

Not only does Pet Putty™ provide 100% effective ingredient, but we do so at a reasonable price.

Concern for our environment is at the heart of Pet Putty™ product formulation and company philosophy. Not only is Pet Putty™ a biobased and biodegradable product, our packaging is as well.

There are no synthetic chemical ingredients in Pet Putty™ to contaminate our environment or wildlife.

Finally, this product, having multiple-uses, is economical. Being concentrated, one ounce of Pet Putty™ will provide a one month supply at our recommended dosage.
